The Gate to bridge Europe to Latin America

From the Spanish Association of Geodetic surveyors we are pleased to introduce the *X Iberoamerican Congress of Geomatics and Earth Sciences* whose fundamental objective is to publicize the scientific and technical advances in the field of topography, cartography, Photogrammetry and other related sciences.

The event will bring together numerous personalities from Latin America, Europe and Spain of all areas related to the Geomatics.

It opens an ample space for the technological and commercial exhibition, which will discuss about the advantages and disadvantages on the application of the new procedures, through proven techniques and an active coexistence among the different sectors business and professionals.

In addition, you can enjoy the exchange of experiences with the papers and presentations of the most important experts of the countries attending the Congress.

A dozen conferences have given us the background and the experience to know that these meetings are always positive, not only for the professional sector, but also for our future employees and to society in general.

The congress will take place on the 16, 17, 18 of October 2012 in Madrid Pavilion of La Pipa.

Thanks in advance for your interest.

Andres Díez -President of C.O.I.T.T.
