

## Workshop on Valuation

With euREAL CLGE has laid the basis for a new standard that could be used in several fields all over Europe or even Worldwide. This is especially true for valuation activities. Since this is a task performed by surveyors in many European countries but not all, it is interesting to look in to some specific questions:

- Why do (geodetic) surveyors play an important role in the valuation sector?
- How do two leading valuation associations operate (RICS, TEGoVA)?
- How useful is the euREAL initiative (European Real Estate Area Label) and its generalization into IPMS (International Property Measurement Standard) in the field of Property Valuation?
- What is the use of the trio IVS (or EVS) – IFRS – IPMS? What is the Red Book... etc.

We are convinced that these questions and others from the floor will stimulate interesting debates.

Two speakers Wolfgang Glunz (chairman of the BDVI - Valuation Committee, TEGoVA-Delegate since 2004, Alexander Aronsohn (RICS Valuation), will inform us during this session.

Wolfgang Glunz

Alexander Aronshon
