

EUROPEAN LEONARDO PROJECT

Exchange of best practices for transfer of innovation of GEO VET education to meet changing labour market needs in Europe following EU GEO policies

Some Member States of the European Union are struggling with challenges of linking geospatial Vocational Education and Training (VET) education to labour market needs.

The Geo Skills Plus project aims to help provide an infrastructure to improve cooperation between vocational **education and training** and the world of work. This will enhance employability and participation in the **geospatial labour market**. The following work packages were defined to support these aims.

“Bridging the Gap”

What are the challenges towards meeting the needs of the labour market?

“Raising Awareness”

What has been done so far in Europe?

“Cooperation Model”

Who are the key players that need to take responsibility in order to improve the geospatial labour market?

**CLGE can make sure that the education sector can meet the needs of the labour market!
We are in charge of the dissemination part of the project**

Paula Dijkstra (Kadaster, the Netherlands) is Project manager Geo skills +
Mark Wijngaarde supports the Dissemination group, a task of CLGE, both will moderate the Workshop.
