

## **Seminar on 3D Cadastral Systems**

**Helsinki 21-22 June 2016**

### **CLGE Resolution**

We are unanimously agreed that 3D cadastre is very important for the evolution and the future of our cadastral systems, the protection of the public and our profession.

Geospatial surveyors from the public and private sectors will play a critical role in delivering these new developments.

Harmonization will be required in order to achieve better inter-operability and better transparency

This is true for 3D but also for the 2D cadastre and the IPMS and ILMS coalitions are important supporting global initiatives.

We invite all participants to share this resolution as widely as possible.

behalf of the CLGE

Maurice Barbieri, President
